Six Sigma Metrics

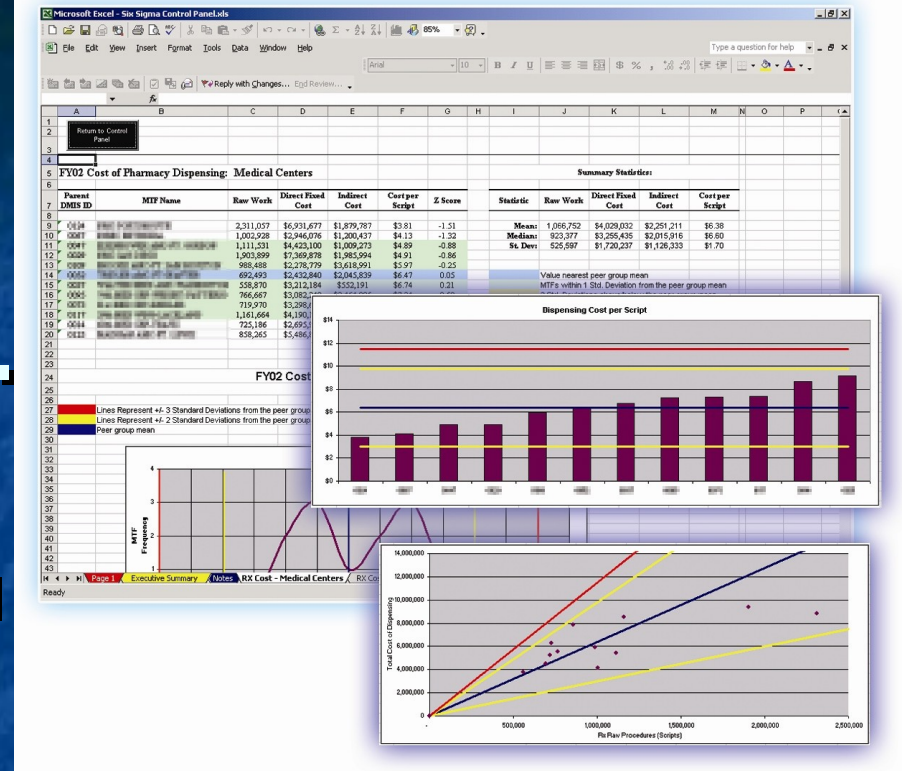

- Timely reporting and data quality improvements enable MEPRS-based management metrics and sophisticated applications
- Applying Six Sigma principles in the MHS can lead to continuous improvement
- As a benchmarking tool, Six Sigma metrics can be used to improve performance

Six Sigma Metrics (Cont.)

- The Six Sigma MEPRS Management Metrics (S2M3) workbook is an interactive tool containing seven key MEPRS-based performance metrics:

- Pharmacy Dispensing Costs
- FTEs per occupied bed day
- Ratio of support personnel to providers
- Pharmacy workload per pharmacy FTE
- Laboratory workload per lab FTE
- Inpatient costs per RWP
- Ambulatory costs per APG

- S2M3 is a blend of Direct Care and civilian industry benchmark metrics
- Implemented in early 2004
- Download: www.MEPRS.info

Definition of Metrics

The metrics contained in this package offer a 360-degree view of the Direct Care operation at MTF including staffing, financial, and workload metrics. By arraying the data in peer groups, MTFs can their position relative to similar facilities. Rankings and sorting of facilities are done based on Z-Score (standard deviations from the peer group mean: $[(MTF - \text{peer group mean}) / \text{peer group standard deviation}]$).

Rx Dispensing Costs: This metric evaluates the cost of dispensing prescriptions, without ingredient costs. Cost data include pharmacy expenses allocated to ambulatory Functional Cost Codes (FCC) pharmaceutical supply costs (ingredient costs). Raw pharmacy workload across ambulatory function cost codes is used as a proxy for individual prescriptions. Detailed separately for each facility are Fixed Costs (pharmacy labor and non-ingredient supplies) and Indirect Costs (overhead costs allocated to the pharmacy, including utilities, command personnel, housekeeping, etc.). MTF-specific dispensing per prescription is calculated as $[(\text{Direct Fixed Costs} + \text{Indirect Costs}) / \text{Raw Pharmacy Workload}]$.

Available FTE per Daily Occupied Bed: This metric evaluates the ratio of personnel (Full-Time Equivalents - FTEs) available to inpatient services wards to daily occupied beds. To calculate this the Average Daily Patient Load (ADPL) was determined as each MTF's total FY02 Occupied Bed divided by 365. The ratio was then calculated as $[\text{Available FTEs} / \text{ADPL}]$.

Six Sigma MEPRS Management Metrics (S2M3)

Six Sigma is a highly disciplined process focusing on development and delivery of near-perfect products and services. It is a statistical term that measures how far a given process deviates from perfection. Identification and measurement of "defects" can systematically facilitate their elimination and movement toward zero defects.

Applying Six Sigma principles in the MHS can lead to continued improvements in data quality and financial management. As a benchmarking tool, Six Sigma metrics can be used to map MTF performance against a group of cohorts or peers - quantifying opportunities for improvement.

Six Sigma MEPRS Management Metrics (S2M3) is a blend of Direct Care and civilian industry benchmark metrics presented in an interactive Excel workbook containing seven key MEPRS-based performance metrics:

- Pharmacy Dispensing Costs
- FTEs per occupied bed day
- Ratio of support personnel to providers
- Pharmacy workload per pharmacy FTE
- Laboratory workload per lab FTE
- Inpatient costs per RWP
- Ambulatory costs per APG

S2M3 is presently at the prototype stage, containing FY02-based metrics. Implementation is planned for early 2004, containing FY03-based metrics.

S2M3 Deployment

- Reception has been very positive:
 - Successful demonstration at DQMC meeting (December 2003)
 - The S2M3 has been incorporated into the WISDOM, MADI and DQ Course curriculums
 - S3M3 prototype was demonstrated at the 2004 TRICARE Conference
- As feedback is received, some metrics may be modified or added; e.g.,
 - RWP / Provider
 - RVU / Provider
 - Radiology Workload / Radiology FTE
